While the Internet is a relatively new technology, that has impacted the world, and provided many benefits, it has also had negative ramifications. Individuals unable to control their use are jeopardizing school, employment and relationships. The concept of "Internet Addiction" is used to explain uncontrollable, damaging use of technology. It is characterized as an impulse control disorder, comparable to pathological gambling, because of overlapping diagnostic criteria and symptomatology. Based on these studies, the IAT was constructed to capture the problematic behavior associated with compulsive use of technology, including online porn, internet gambling and compulsive use of online games and social media. The Internet Addiction Test emerged as the first validated measure of Internet and technology addiction. The assessments can be administered in a variety of mental health settings, including private practice clinics, schools, hospitals and residential programs. They can be used when there is suspicion of Internet addiction, as part of a broad intake assessment, or for use in a wellness curriculum to help participants evaluate their own Internet behavior. The IAT can also be a valuable pre-employment screening device, to detect internet addiction among job candidates, to improve productivity and reduce corporate

liability. Based on 20 self-report items, the IAT assesses for the presence of addiction to the Internet, electronic entertainment, social media, and general use of electronic devices, and also measures the severity of addiction, in terms of mild, moderate or severe. Furthermore, because Internet addiction may be driven by different reasons and manifest in different ways, requiring different types of treatment, the IAT produces scores related to the following areas: EscapeCompulsionNeglecting dutiesAnticipationLack of ControlSocial Avoidance

A look at the role of resilience in promoting a happy and healthy life introduces seven proven techniques for developing the capacity for coping with the challenges and setbacks of life, from self-criticism and negative self-images to crises, anxiety, and grief. Reprint.

Advanced test of non-verbal reasoning ability, ie. a measure of eductive ability or fluid intelligence which is relatively independent of specific learning acquired in a particular cultural or educational context. Test is used as a means of assessing all the analytical and integral operations involved in the higher thought processes and

differentiates clearly between people of even superior intellectual ability.

Implementing safety practices in healthcare saves lives and improves the quality of care: it is therefore vital to apply good clinical practices, such as the WHO surgical checklist, to adopt the most appropriate measures for the prevention of assistance-related risks, and to identify the potential ones using tools such as reporting & learning systems. The culture of safety in the care environment and of human factors influencing it should be developed from the beginning of medical studies and in the first years of professional practice, in order to have the maximum impact on clinicians' and nurses' behavior. Medical errors tend to vary with the level of proficiency and experience, and this must be taken into account in adverse events prevention. Human factors assume a decisive importance in resilient organizations, and an understanding of risk control and containment is fundamental for all medical and surgical specialties. This open access book offers recommendations and examples of how to improve patient safety by changing practices, introducing organizational and technological innovations, and creating effective, patient-centered, timely, efficient, and equitable care systems, in order to spread the quality and patient safety culture among the new generation of

healthcare professionals, and is intended for residents and young professionals in different clinical specialties.

Morrison provides a critical history of analytic and psychiatric attempts to make sense of shame, beginning with Freud and culminating in Kohut's understanding of shame in terms of narcissistic phenomena. The clinical section of the book clarifies both the theoretical status and treatment implications of shame in relation to narcissistic personality disorder, neurosis and higher-level character pathology, and manic-depressive illness.

In Practical Thinking de Bono's theme is everyday thinking, how the mind actually works - not how philosophers think it should. Based on the results of his famous Black Cylinder Experiment (a critical thinking task that asks participants why they think a black cylinder falls over), de Bono explores the four practical ways of being right. From there he picks out and names the five levels of understanding - and the five major mistakes in thinking. From memes and Instagram to twitter and bestselling books like Mistakes I Made At Work, mistakes - and what we can learn from them - are a hot topic. With Edward you'll learn exactly why we all make them.

Combining clinical diagnostic observations, advances in treatment, and empirical evidence, Disorders of Narcissism provides a comprehensive overview of psychotherapy with narcissistic disorders. The book probes such important subjects as transference and countertransference, the self-psychological perspective, an object-relations approach, and the treatment of narcissistic disorders in group and couples therapy.

Identifies different learning styles and offers strategies for increasing learning potential and improving memory skills

There has been much debate on the purposes and methods of assessment over the last couple of years. This book gathers together the latest thinking and looks at how assessment can be used to promote or inhibit learning. Unlike other books on the market, this one summarizes theory and shows how it can be best put into practice, using as little jargon as possible. Some of the issues discussed in this text include: * how assessment can erode self-esteem and motivation * how skills of reflection, self-evaluation and personal target setting can impact on learning * how far learners of all ages understand what they are required to learn * how far students are able to evaluate their own performance and what schools can do in the short, medium and long-term to promote more effective learning. Part of the What's In It For
