For well test analysis, the variation of pressure with time is usually expressed in graphical forms, that is, by a Cartesian plot of pressure vs time, semilog plot of pressure vs time, and log-log plot of pressure and its derivative vs time. Also, because the log-log plot can best reflect the flow characteristics, log-log plots are often used to represent well test analysis models in modern well test analysis.

Data gathered during the test period includes volumetric flow rate and pressure observed in the selected well. Outcomes of a well test, for instance flow rate data and gas oil ratio data, may support the well allocation process for an ongoing production phase, while other data about the reservoir capabilities will support reservoir management.
